🔗 <https://siddhesh21.github.io/Siddhesh-s-Portfolio/>

Charismatic, driven, and passionate about technological innovation and software development. Excellent communication, interpersonal, influencing skills, and consistently demonstrates initiative. Skilled at using educational knowledge and ready to develop new skills and grow knowledge by gaining practical experience. Quick learner and adaptive with new software platforms and technology. My goal is in helping to building towards a sustainable environment through technology.

## SKILLS

**Programming Languages** Python, JS, CSS, Java, SQL, HTML.

**Machine Learning Skills** Linear Regression, Logistic Regression, SVM Classifier, K-fold Cross-validation, K-means, NLP, CNN.

**Tools and Technologies** Cloud Computing (AWS, IBM-Watson Studio, Skill Network Lab), NetBeans IDE, Android Studio, GCP, MATLAB, MS Office, Windows, Linux (Ubuntu).

**Python Libraries** Numpy, Pandas, PyTorch, Keras, TensorFlow, Scikit-Learn, SciPy, matplotlib, seaborn, Plotly.

## EDUCATION

**Trinity College Dublin**, Dublin, Ireland

Sept. 2021

*Master in Computer Science: Intelligent Systems*

My course is driven by interactive web applications and systems, which are becoming an integral part of our daily lives. Designing and building these systems requires expertise in artificial intelligence, human language understanding and generation, web systems and applications, data analytics, and knowledge engineering.

Core modules: Machine Learning, Artificial Intelligence, Data Analytics, Applied Statistical Modelling, Advanced Software Engineering, Knowledge & Data Engineering, and Text Analytics.

**University of Mumbai**, Mumbai, India

July 2016 – Apr. 2019

*Bachelor in Computer Science*

**CGPI - 8.28**

My course was driven by computer programming languages along with practical implementation, with polarity of modules such as Cyber Forensics, Ethical Hacking, Digital Image Processing,

Core modules: Data Science, Cloud Computing, DBMS, Android Developer.

## EXPERIENCE

**Ugam Solutions Pvt Ltd**, Mumbai, India

July 2019 - June 2020

*Associate Analyst in Market Research Operation*

Ugam is a Data Analytics company that helps the client to make a decision on the data acquired.

- My major role was programming for four different types of projects and over 25 individual studies within 8-9 months. I worked on the Decipher platform. As per client requirements, studies included static, dynamic, media contents, and client-specific survey setups and modules.
- My client was MarketCast, UK hence worked at different time zones and meeting the client's deadlines.
- Along with programming, I would debug data queries by the client, manage tasks such as client requests and changes, data manipulation, vendor distribution end links, Internal quality checks, mobile

---

compatibility, and User Interface testing, dynamic media setups, and project closure data.

## Skills - Courses & Certification

### Google Cloud — Coursera

Modernizing Data Lakes and  
Data Warehouses with GCP – Aug. 2020

### Google Cloud — Coursera

Google Cloud Platform Big Data and  
Machine Learning Fundamentals - July 2020

### IBM — Coursera

IBM AI Engineering Specialization – June 2020

### Amazon Web Services — Coursera

AWS Fundamentals: Going Cloud-Native - June 2019

### Amazon Web Services — Coursera

How Google does Machine Learning - June 2019

### IBM — Coursera

IBM Data Science Specialization - May 2019

## PROJECTS

### Capstone Project with Deep Learning.

June 2020

Software/ Platform/ Tools: IBM Watson Studio – Jupyter Notebook: Apache Spark 2.6, Python 3.6, Scikit-learn.

In this project, I performed training and testing the image data set and making use of a model. Train and evaluate our model for prediction. URL of Project on GitHub [link](#).

### Applied Data Science specialization capstone.

Apr. 2019 - May 2019

Software/ Platform: IBM Skills Network Labs – Jupyter Notebook

Business Problem brought up by Client. URL of Project on GitHub [link](#).

### Android Application – StepCounter

Jan. 2019 – Mar. 2019

In this project, developing precise application for purpose of tracking steps and the activity through accelerometer present in mobile device showing analytics and summarization of the steps over a day, period of days, weeks, and month. Application developed to be as small as possible and can have minimal RAM requirement of one's device.

Software/ Tools: Android Studio, SDK toolkit, Java, Swing, XML, virtual interface. URL of Project on GitHub [link](#).

### Java Software Application – Calorie Analyzer

Sept. 2018 - Oct. 2018

This project is first step towards being healthy by knowing how many calories needed for their body without any activity (BMR) and with array of activity levels done (TDEE) of any users, and assist them either by losing or gaining weight.

Software/ Tools: NetBeans IDE 8.0/1/2, Java SE, AWT. URL of Project on GitHub [link](#).

## Hobbies and Interests

**Health and Fitness Practitioner** - Helped over 35 people to achieve their good health goals and boosted them to live an active lifestyle to sustain over time.

**Sports/ Athletic** - HIIT training, Powerlifting, Badminton, and Swimming.

**Scout** - Troop Leader & Patrol Leader of 55 scouts in High School. Outgoing in Nature: Hiking and Camping.
